Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: none of the prior art of record discloses a golf club wherein a first weight is secured internally within a golf shaft between a first lower plug, that is an EPDM tapered plug, and a second upper plug, that is a silicon gel plug. In addition, regarding US Patent No. 5,554,078 to Hannon et al., it would not be obvious to change the upper plug (30) that is made of low density such as cork to a silicon gel as claimed in the instant application because doing so would destroy the teaching of the Hannon reference. For example, the Hannon device has adjustable weight (see column 7 lines 8+). However, in the instant application, Applicant has stated that the silicon gel is to harden and adhere to the shaft (see page 6 of the instant application), and this indicates that once the weight is positioned inside the shaft and once the silicon gel hardens, the weight of the club could not be adjusted. Regarding US Patent No. 5,082,279 to Hull et al., it would not be obvious to substitute the valves (20, 22) to the claimed type plugs as taught by the instant application since doing so would destroy the teaching of the reference as for the same reasons set forth in the above discussion of the Hannon reference.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
